Partner - Administrative Features

This presentation provides users with a comprehensive understanding of Mahyu's administrative features, which enable seamless management, control, and monitoring of system functionalities. Specifically designed for **partner** in each country and **GSA (General Sales Agent) companies**, these features integrate various elements into a unified ecosystem. The interlinked ecosystem empowers Mahyu's partner to optimize logistics operations, administration, accounting and efficiently, ensuring streamlined services for all users.

Introduction

Mahyu's target market launches to include partners in Europe, and Asian regions. The South East Asia region, consisted of 10 countries, home to over 670 million population is rapidly becoming a major *global manufacturing and services centre*. SME-Small & Medium Enterprises, play a crucial role in providing logistics services to Europe, the U.S., and other international markets.

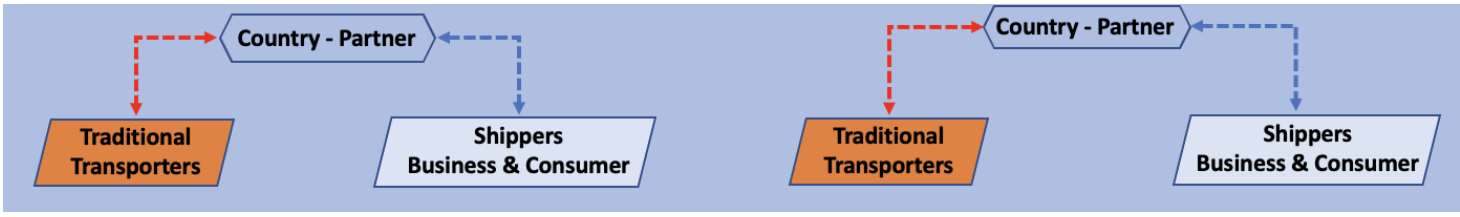

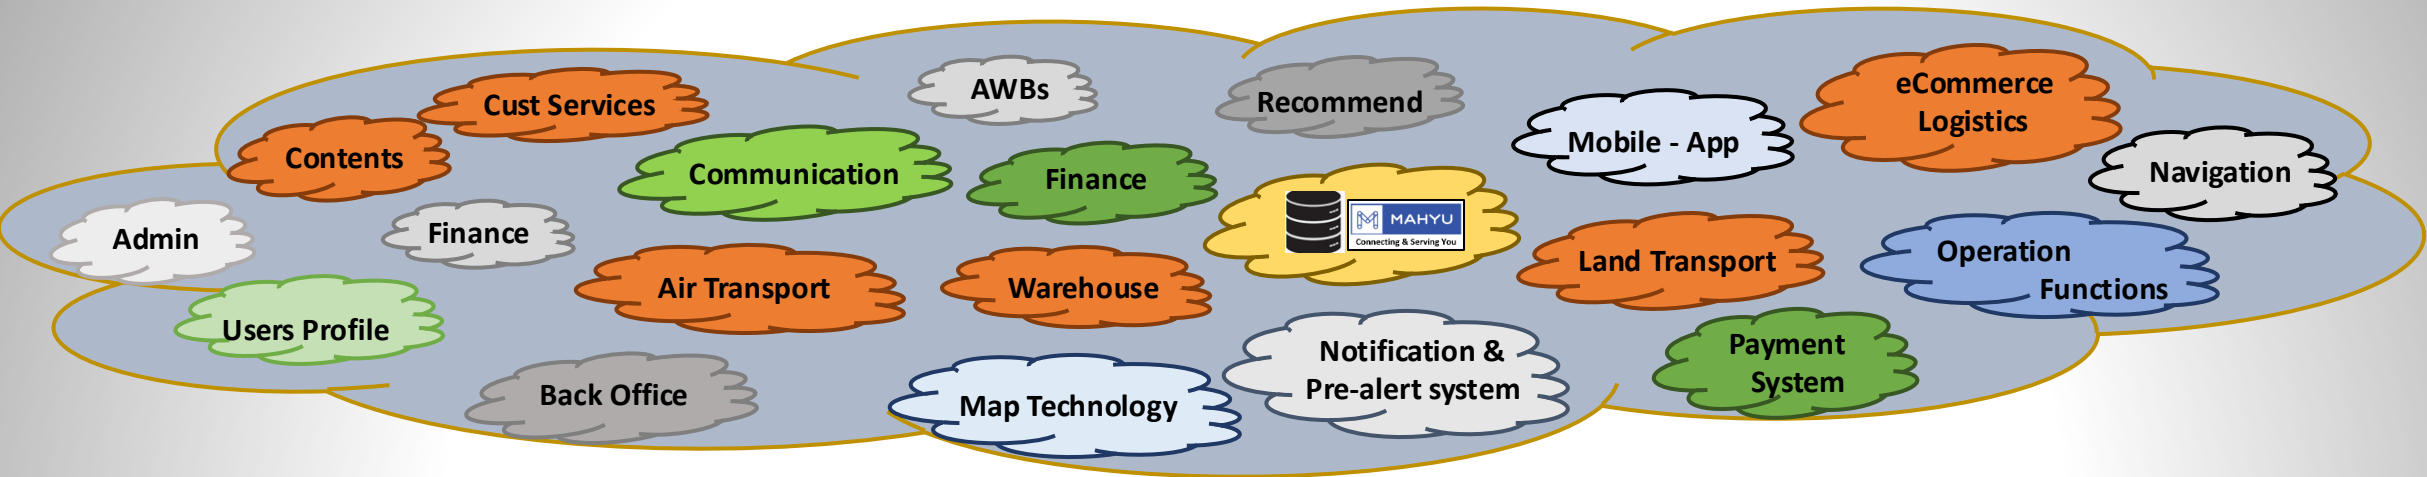

The Company

Mahyu is a technology-driven company dedicated to developing a digital logistics infrastructure with an open system architecture. The system makes it easier for SME users to plan expansion strategies, streamlined workflows and launch new services.

Using the platform's **ready-made templates**, partners and forwarder/transporter can customize their "branding, adjust pricing, and fine-tune service details", all in just a few clicks. The system enables users to create direct and transshipment flight routes, seamlessly linking previously unconnected two airlines locations into a single, integrated route.
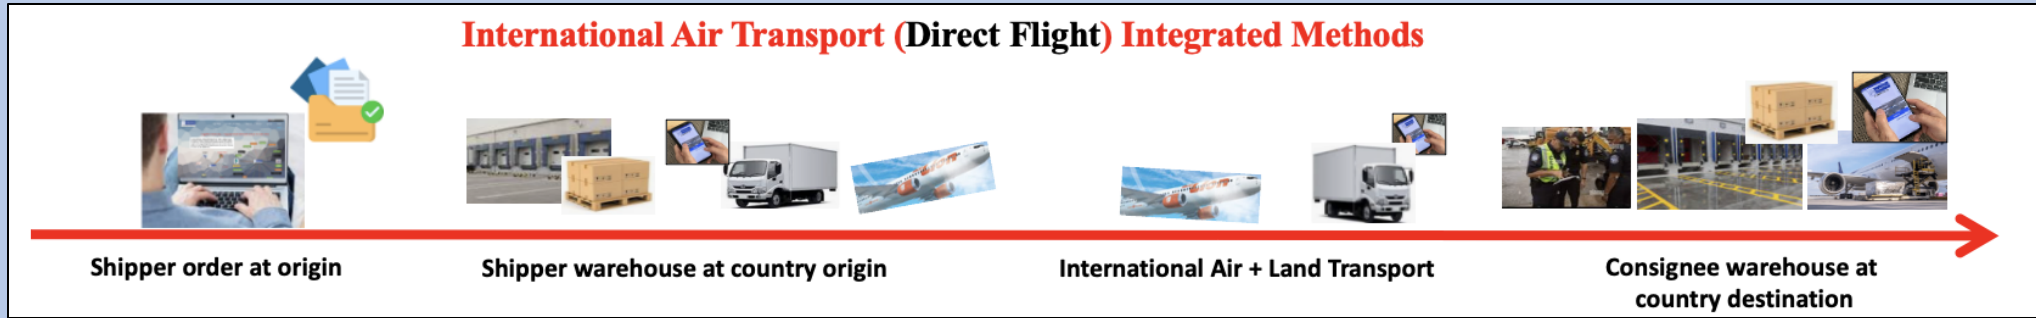

Management Capabilities

This system collaborates with a **partner in each designated area** to **manage, operate, and monitor daily activities efficiently**, ensuring that **transactions in each region comply with local government regulations**.

By adapting regulatory requirements into its operations, the system provides a **seamless and compliant logistics network**, reducing risks, enhancing transparency, and streamlining cross-border processes for all users.

This **partner-centric approach** fosters a **trusted and interconnected logistics ecosystem**, enabling seamless operations, enhancing compliance, and ensuring smoother users coordination across different regions.

By decentralizing management, the system empowers partners to optimize local knowledges while maintaining global connectivity.

Direct and Transshipment International Route

International Air Transport (Direct Flight) Integrated Methods

Shipper order at origin   Shipper warehouse at country origin   International Air + Land Transport   Consignee warehouse at country destination

International Air Transport (Transshipment Flight) Integrated Methods

Shipper order at origin   Shipper warehouse at country origin   Transit warehouse and uplift   Customs Clearance   Consignee warehouse at country destination
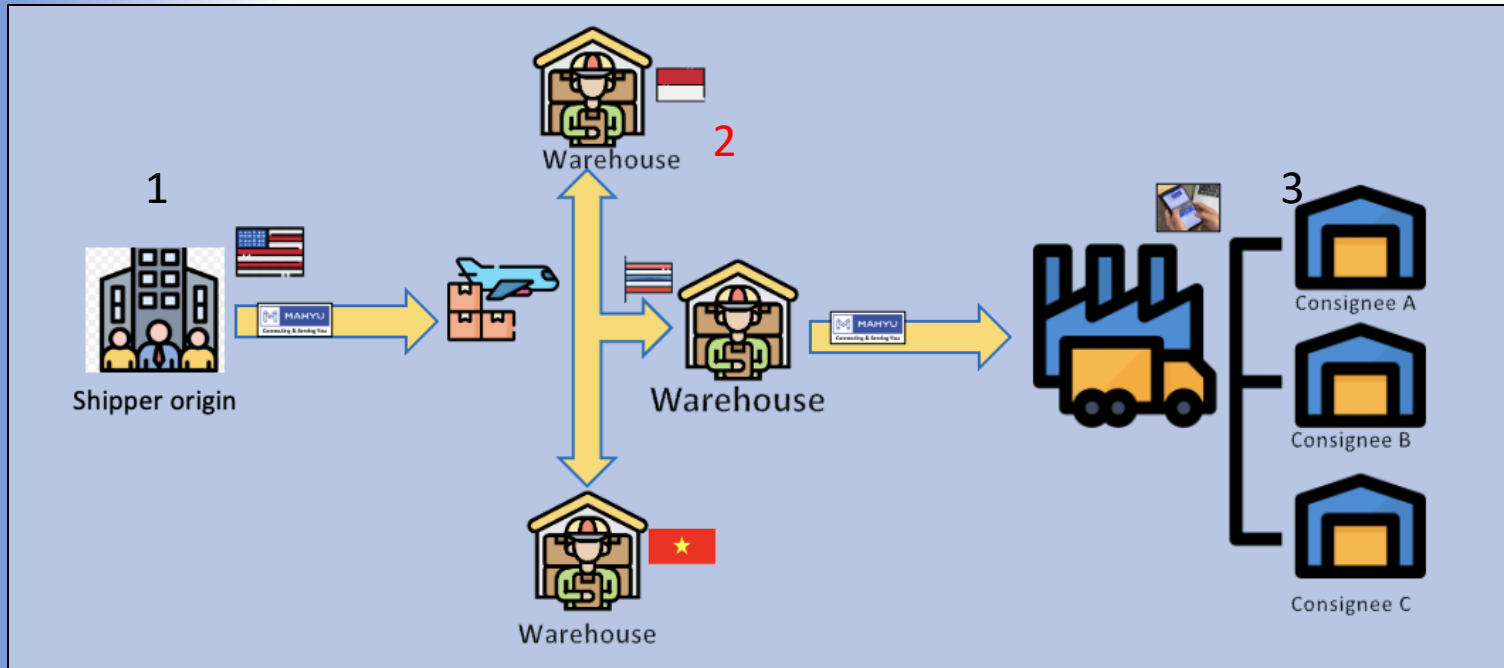

The system establishes a direct connection between **forwarder users and airline operators**, allowing shippers to receive immediate booking space confirmations from airlines.

Mahyu eliminates the **traditional, time-consuming** process of requesting and waiting responses from forwarders. Instead, the system provides **real-time interaction and instant automated responses** to each shipper request.

The system facilitates direct and transshipment flight routes, enabling seamless connections between **two direct flight offer by distinct airlines.**

This feature enables GSAs to **enhance their dynamic cooperation** by facilitating smooth transitions from the origin through a transit location to the final destination, while the **admin menu** ensures controlled management access

Warehouse-Domestic-International Integration

3. Shippers can seamlessly arrange domestic transport to the consignee's address using Mahyu's domestic transport feature, along with instruction to warehouse operator.

With an all-in-one integrated ecosystem, users enjoy the convenience of conducting both domestic and international trade seamlessly, enabling smooth transactions from origin to temporary storage and final distribution. All handle by shipper remotely.

1. Shippers at the origin can streamline their logistics by directing shipments to warehouse operators at the destination.

2. Once the shipment arrives at destination, transporter/forwarder clear customs and deliver shipment to warehouse location selected by shipper

Administration for Partner and Shipper Users

The system equips with administration features for **partner in each area** to manage, control and operate Mahyu's functionalities in alignment with their specific working environment.

Each partner can manage the **financial aspect**s of shipper users, allowing them to grant flexible credit lines or enable online payment options based on user eligibility and history record.

Partners can **review** each shipper's performance, including current and past sales activity summaries, to assess their business engagement.

Administration For Transporter and Setting Menu

Transporter ⌄
- ☑ Verify Local Permit
- ☑ Verify Business License
- ☑ Verify Customs License
- 📄 Transaction Summary ‹
- 📅 Paid Transporter List
- 📅 Unpaid Transporter List ‹
- 📄 Transporter Account Detail

The system enables partners to **regulate transporter users** by restricting service offerings based on their licenses and references, ensuring compliance and quality standards.

At the same time, partners can actively monitor each user's activity and performance summary, providing insights into efficiency, reliability, and overall service quality.

⚙ Settings ⌄
- $ Currency
- 🏦 Country Currency
- ✈ Airport
- ✈ Airline
- ✈ Aircraft Type
- ✈ Flight Number
- ⊘ Country Import HS Code
- ⊘ Country Export HS Code
- 📍 ZIP Code Pin

The settings feature allows partners to **configure parameters** specific to each location, ensuring the system operates in compliance with local regulations.
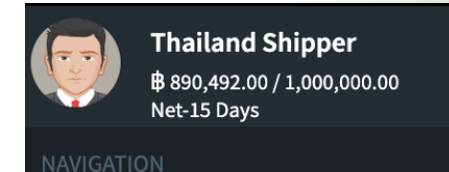

For instance, the **country currency setting** enables control over accepted currencies, allowing shippers to make payments using an approved currency when transacting with transporters. This ensures invoice issues by the system is in compliance to financial operations and regulatory.

| Currency Code	Currency Name	Active	
USD	U.S. Dollar	Yes	✎ ✖
THB	THB	Yes	✎ ✖
BND	BND	Yes	✎ ✖
IDR	Rupiah	Yes	✎ ✖
JPY	Japanese Yen	Yes	✎ ✖
EUR	Euro	Yes	✎ ✖
SGD	Singapore $	Yes	✎ ✖

Integrated with Financial Options

Business User
✓ Eligible for a **Credit Line Facility** if they have **Good Standing References**
✓ Allows businesses to manage cash flow and defer payments
✓ The system blocks when invoice due is not settled

Thailand Shipper
฿ 991,803.00 / 1,000,000.00
Net-15 Days

Thailand Shipper

The Administration Feature-Connecting and Monitoring

The **Transporter User** consists of the following steps:

1.Registration Process – Transporter users sign up on the platform.

2.Submitting Credentials – Upload necessary identification and authorization documents.

3.Submitting Company Information – Provide details about the company, including legal and operational information.

4.Build Up Services Capability – Define available services, such as freight handling, customs clearance, or last-mile delivery.

5.Services and Pricing Information – Set pricing structures for the offered services.

6.Perform Transactions – Start processing shipments and handling logistics operations.

7.Summary Reports – Access performance reports and analytics for business insights.

The **Shipper User** consists of the following steps:

1.Registration Process – Sign up on the platform as a shipper.

2.Submitting Company/Individual Information – Provide necessary details, including business location, names

3.Submitting Financial Information – requirement of credit line limits

4.Build Up Logistics Requirements – Define shipment details

5.Receive Transaction Notification .

6.Perform Invoice Payment – Complete invoice payments via credit line (if eligible) or online payment (QR code for Southeast Asia, credit card for other regions).

7.Review History Records – Access past shipments, payments, and transaction summaries for tracking and reporting.

Summary

- The Administration feature is specifically designed to work with regional partner, enabling them to seamless system operations within their **designated areas** while adhering to local **regulatory requirements**. The system functionality equips partners with comprehensive tools to manage, monitor, and customize system features tailored to their region's needs, ensuring compliance to government regulations.

- By incorporating standardized procedures and **ready-made templates** familiar to users, the system simplifies operations. It directly connects shippers' requirements with transporters' capabilities, ensuring an optimized matching process. Mahyu's platform leverages advance technology to **minimize human intervention**, ensuring a seamless logistics process.

Thank You

This presentation of Mahyu's infrastructure-platform, highlighting its capabilities and benefits for domestic land transport, international air transport, warehouse management, and eCommerce logistics. As the platform continues to evolve through ongoing enhancements in algorithm configuration, design structure, and process optimization, certain features may be updated over time. Additionally, some capabilities remain undisclosed due to intellectual property and copyright protections held by Mahyu LLC.
